

Encryptics for Email

Supported Platforms

- Windows 
- Mac 
- iOS 
- Android 

Software Package

- Platform Native Apps
- Add-In for Outlook[®]
- Web-based Admin Portal
- Free download for recipients

Security Features

- True End-to-End Security
- Device Level Encryption
- Data Rights Management
- Policy Based Protection

Encryptics for Email's latest version 6.0 works seamlessly within Microsoft Outlook[®] for Windows[®] and with any email provider to protect and control all of your important messages and attachments.

Send corporate IP (intellectual property), personal data, legal docs, financial data, medical records, and more anywhere in the world—we'll protect your valuable data no matter where it goes. Our Trusted Peer-to-Peer[™] and SAFE technology keeps unauthorized users out, so you don't have to worry about hacks or leaks.

Device Level Encryption and Authentication

Device Level Encryption means your data is secured as soon as you hit Send—before it leaves your device. This way, your data is never “up for grabs” as it travels through cyberspace. Once secured, your data is delivered to its destination without ever passing through or being stored on our servers. Encryptics authenticates recipients along with their devices and ensures they are authorized before permitting decryption.

Data Rights Management (DRM)

With DRM, recipients won't be able to access, alter, print, copy save or forward, your data unless you explicitly permit it. You can even specify a timeframe that recipients may access your content. Senders can revoke access at any point in time.

Version 6.0 - New Features & Functions

- Ability to decrypt .SAFE files directly within the Outlook[®] viewing pane
- Ability to reply, reply all, and forward decrypted content right from within Outlook[®]
- Ability to create and securely store encrypted messages without an active Internet connection - “Offline sending”
- Ability to queue encrypted messages when no Internet connection is present and providing the ability to automatically send at a later time – “Message queuing”
- Ability to access Encryptics configuration settings from within Outlook[®]
- Ability for users to access & manage their Encryptics account from within the Outlook[®] Add-In
- Ability to support multiple user email accounts within Outlook[®]
